Seeing is Believing

Your Challenge, Your Choice LSI's Legacy™ & Scottsdale® Legacy™ Solutions

Available in Both Flat and Dropped Lens

CRU FKL - Flange/Flush Mount Kit

- **Most Attractive** - For those who prefer a flush, soffit style look under the canopy, select the Flush Mount option when you order the standard CRU fixture. Least visible hardware. Secured to deck via framing members and/or suspension cables, by others. Also very easy to install - maximum deck cutting required: 23-1/4"

CRU DDM - Direct Mount Fixture

- **Most Economical** - For those who prefer easily accessible, yet unobtrusive hardware to provide quick, easy, mounting system. Secured to deck via 4 screws through frame, directly into structure support. Deck must bear weight of fixture. This choice minimizes your cost of installation and ROI. Minimal cutting of deck, 1 1/4".

CRU UDD - Universal Mount Kit

- Requires less cutting of deck than CRU FKL, 13"x13". Secured to deck via:
 - 4 fasteners through mounting plate
 - 2 brackets attached to fixture and mounting plate

Mounting plate is used to provide stiff surface to mount fixture when deck material is insufficient to bear the weight of the fixture.
